

# Trusted Accounting in P2P Environments

## Motivation

- Accountability in decentralized systems
- Enabling commercial p2p applications

## Challenges

- Clear attribution of service usage and provisioning to peers
- Enable usage of this information for an incentive system
- Enable the enforcement of behavior rules
- Enable usage of this information as basis for a (to p2p external) payment system

## Contribution:

- Token-based Accounting-Scheme that does not compromise the concept of p2p
